

Testimonials: Elevating Customer Success to the Forefront

Case Study #1

Situation: A Phase II multimodal imaging study for Parkinson's Disease faced challenges with PET radiotracer supply, site management in the USA and EU, and the need for rapid central read turnaround times.

"Centafore seamlessly collaborated with us. The collective experience and technical expertise that Centafore brought to the table is impressive... we very much value the support with PET site selection and activation"

- Head of Drug Development

Case Study #2

Situation: A combined Proof of Concept (PoC) and Phase I study faced budget and quality challenges in evaluating AI Deep Learning software for synthesized MR CNS images with low versus standard doses of a diagnostic agent.

"Centafore's reading design tackled complex requirements while minimizing reader bias. Their centralized setup streamlined processes, enabling efficient resource management to reduce costs and meet study timelines"

- Chief Operating Officer

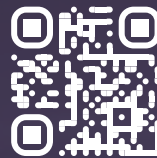

Testimonials from clients previously associated with General Clinical Imaging Services, now operating under the Centafore brand.

The Centafore Story

Centafore has served as the Imaging Core Lab for Bayer AG for over 25 years and has evolved into a prominent iCRO serving external customers. Our vision is to be the trusted provider of innovative imaging solutions that empower clinical trials and SaMD development with precision, efficiency, knowledge, and experience.

We leverage our expertise to deliver tailored, technology-driven imaging solutions. Our clinician-led approach, supported by advanced AI, enables us to partner with customers in generating reliable image-based evidence and navigating the complexities of clinical trials.

www.centafore.com

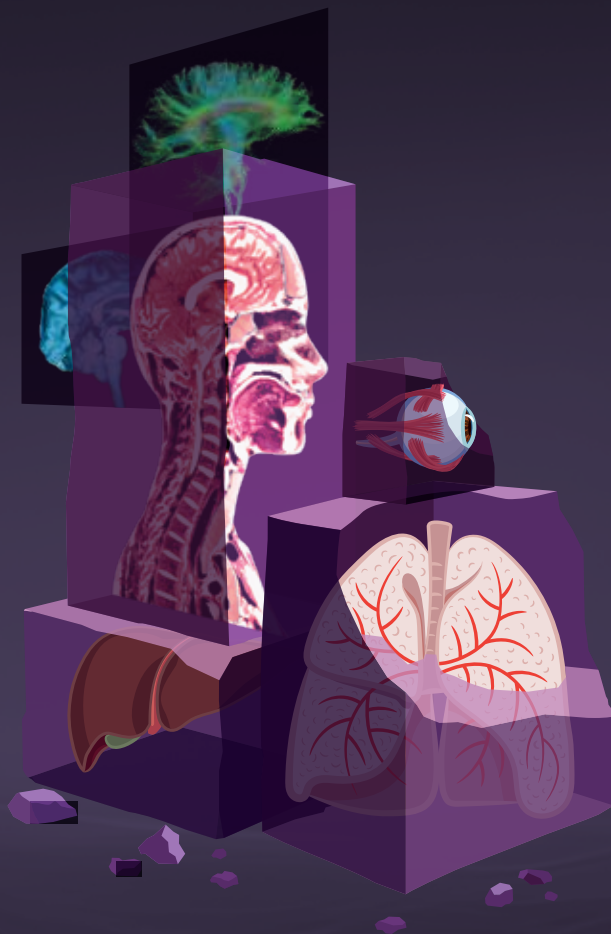

Centafore operates as a division of Bayer Radiology. All study information is managed in accordance with stringent data privacy standards, utilizing robust security protocols and firewalls to ensure confidentiality.

What if imaging outcomes are your trials' advantage?

Unlock the Potential of Imaging Outcomes and Accelerate Your Drug and Device Developments

Centafore: Trusted Experts for Image-Based Evidence Generation

Centafore is an Imaging Contract Research Organization (iCRO) that supports early research through phase IV trials and Software as a Medical Device (SaMD) for pharma, biotech, medical device, and digital health companies.

Each study is unique, and we develop a tailored imaging strategy that emphasizes:

Quality: Robust quality control and expert oversight for accurate and reliable results.

Efficiency: Technology-driven solutions for streamlined workflows.

Experience: Broad clinical expertise with dedicated radiologists for every study.

Technology-Forward and Tailored Solutions for Your Imaging Needs

Study Concept & Planning

- Consultation on modalities, workflows, standards, specifications, assessment criteria, protocols, and central read design
- Expert advice on advanced topics including molecular imaging, AI algorithm validation
- Development of study documents with AI-driven first draft support

Study Start-up

- Imaging site qualification and training
- Study-specific image transmission and read systems setup
- Expert reader selection and training, including the use of synthetic datasets

Study Conduct

- e-Transfer with real-time quality feedback and AI-driven multilingual PHI detection & removal
- Image data QC and processing by trained radiographers and imaging scientists
- Data curation, labeling, and segmentation
- Real-time operational and quality metrics
- Complex analysis of PET, MRI, fMRI

Independent Central Reads

- Real-time and batched central reads for imaging-based decisions (eligibility, safety) and analyses (efficacy, exploratory)
- Reader performance monitoring system and metrics, including chatbot
- Flexible Centafore platform utilizing optimal analysis software

Post-Trial Activities

- Regulatory submission and audit support
- Secure imaging data archival for compliance
- Publication support for imaging methods & results

Clinician-Led Approach: Creating Confidence in Outcomes

At Centafore, we believe that the true value of technology lies in the expertise behind it. Our solutions are guided by highly experienced imaging clinicians and each study is led by a dedicated board-certified radiologist. This clinician-led approach emphasizes the human element in clinical trials, ensuring consistent support and scientific guidance from start to finish.

Centafore Platform: Transforming Pixels into Powerful Insights

Centafore's proprietary platform centralizes imaging tools and processes, utilizing AI and automation to enhance efficiency and collaboration among stakeholders.

The platform includes:

Centafore Insights: Actionable Study Metrics & Reports

Centafore Sync: Image e-Transfer, QC, & Processing

Centafore Review: Integrated Blinded Reading System

Centafore Perform: Reader Performance Monitoring
